1. Purpose. To publish revised Individual Training Standards (ITS) for Occupational Field 58.

2. Cancellation. MCO 1510.86A

3. Background

a. References (a) through (d) establish the system used to publish all training standards, provide policy, and assign training responsibilities, especially as applied to the Systems Approach to Training (SAT).

b. ITSS establish the training requirements for all Marines in the same Occupational Field (OccFld), Military Occupational Specialty (MOS), or billet. They provide a foundation upon which unit commanders, Functional Learning Center (FLC) directors, and Distance Learning (DL) developers build training packages for individual Marines as part of unit training plans or formal courses of instruction.

c. ITSS represent the skills that contribute to the unit mission as expressed in the Mission Performance Standards (MPS). Changes to doctrine or force structure or the introduction of new weapons or equipment may necessitate revision of this Order.

4. Summary of Revision. Significant revisions to this order have been made, including the addition of tasks for MOS 5815 Special Reaction Team (SRT).

5. Information

a. ITSS are used by unit commanders, FLC directors, and DL developers to design, develop, and maintain training standards. These standards are used to determine the training requirements for individual Marines and to provide a basis for the design, development, and maintenance of training standards. These standards are used to determine the training requirements for individual Marines and to provide a basis for the design, development, and maintenance of training standards.

responsible for the sustainment of all individual tasks that have been deemed, through analysis, to support the unit's Mission Essential Task List (METL). Unit commanders can, therefore, use the tasks contained in this order as the basis of individual training through Managed On-the-Job Training (MOJT), instruction in unit-level schools, or incorporation in their training plans. FLC directors and DL developers will derive Terminal Learning Objectives (TLO) and Enabling Learning Objectives (ELO) from the tasks, conditions, standards, and performance steps of each associated ITS. Task lists reported on Course Descriptive Data (CDD) submissions will consist of tasks contained in this order that are designated for training at the appropriate level in the FLC. Task lists reported on Distance Learning Descriptive Data (DLDD) submissions will consist of tasks contained in this order that are designated for DL training at the appropriate level.

b. Commanders and formal schools must apply the ORM process contained in reference (e) during the design, conduct, and supervision of all individual and unit training.

6. Action

a. Commanding General, Marine Corps Combat Development Command (CG MCCDC)

(1) Ensure all FLCs use this order to train personnel to the standards required by grade and MOS.

(2) Ensure the Marine Corps Institute (MCI) and the Training and Audiovisual Support Centers (TAVSC) provide standardized performance support tools (PST) and other training support requirements to facilitate training in units.

(3) Review, revise, and manage the upkeep of this order in coordination with Operating Force and Supporting Establishment commanders and MOS Specialists/OccFld Managers.

(4) Ensure the Combat Development System identifies and mitigates the impact on training, by MOS and ITS, of all new equipment.

b. Commanding Generals of the Marine Forces and Supporting Establishment Commands and Commanders of Separate Organizations not Commanded by a General Officer

(1) Use this order as the basis for individual training.

(2) Conduct MOJT programs and/or instruction in unit level schools to satisfy initial, sustainment, and refresher training requirements in so far as the tasks support unit mission requirements.

7. Submission of Recommendations and Requirements. Recommendations concerning the content of this order are invited. Submit recommendations for additions, deletions, or modifications to CG MCCDC (C 472) via the chain of command.

8. Reserve Applicability. This order is applicable to the Marine Corps Reserve.

DESCRIPTION OF AN INDIVIDUAL TRAINING STANDARD

1. ITS Designator. Each ITS has a unique three-part identifier that represents an MOS (or billet), a duty (or functional) area within that MOS, and a specific task included in that duty area. Each part is separated by periods. An example of an ITS Designator is 0311.02.08.

a. The first four positions ("0311" in the example above) represent the MOS or billet. For any ITS associated with an official MOS, the four digits must be identical to those assigned to the MOS in MCO P1200.7 (MOS Manual).

b. The middle two positions ("02" in the example above) represent the duty or functional area. Duty areas within a given MOS are assigned Arabic numerals. Duty areas 1 through 9 are always preceded by a leading zero. In the example above, "02" represents the second duty area under MOS 0311.

c. The last two positions ("08" in the example above) represent a specific task. Tasks within a specific duty or functional area are assigned Arabic numerals. Tasks 1 through 9 are always preceded by a leading zero. In the example above, "08" represents one task within the second duty area under MOS 0311.

2. ITS Components. There are six basic components of an ITS, five of which are mandatory:

a. Task. The task describes a specific and necessary behavior expected of a Marine in a particular MOS or billet. It is a clearly stated, performance-oriented action requiring a learned skill. Skills that "make" a Marine or qualify that Marine for an MOS are designated as "Core." Those advanced skills that are mission, grade, or billet specific are designated as "Core Plus."

b. Condition(s). This portion of the ITS describes the equipment, manuals, assistance/supervision, special physical demands, environmental conditions, and location affecting a Marine's performance of the task under real-world circumstances.

c. Standard(s). This portion of the ITS describes the level of proficiency to which the individual must perform the task.

d. Performance Steps. Collectively, the performance steps represent the logical sequence of actions required of the Marine to perform the task to standard. These actions are typically detailed in the references.

e. Reference(s). References are doctrinal publications, technical manuals, and other publications upon which the ITS and its performance steps are based. They should be readily available and provide detail to the procedures that are only summarized in the performance steps.

f. Administrative Instructions (Optional). Administrative instructions provide the trainer/instructor with special required or recommended circumstances, including safety precautions, relating to the training or execution of the task. These instructions may also clarify the meaning of the task.

3. ITS Training

a. Initial Training Setting. All ITSs are assigned an initial training setting that includes a specific location for initial instruction [Functional Learning Center (FLC) or Managed On-The-Job Training (MOJT)], a sustainment factor (number of months

ENCLOSURE (1)

between evaluation or retraining to maintain the proficiency required by the standard), and a "Required By" grade (the lowest grade at which task proficiency is required).

b. Training Materiel (Optional). Training materiel includes all training devices, simulators, aids, equipment, and materials [except ammunition, distance learning (DL) products, and performance support tools (PST)] required or recommended to properly train the task under the specified conditions and to the specified standard.

c. Ammunition (Optional). This section includes any ammunition, explosives, and/or pyrotechnics required for proper training of the ITS.

d. Distance Learning Product(s) (Optional). This section includes a list of any currently available or planned DL products designed to provide training related to this task.

e. Performance Support Tool(s) (Optional). This section includes a list of any currently available or planned PSTs designed to provide training related to this task.

MANAGEMENT OF INDIVIDUAL TRAINING STANDARDS

1. ITS Use

a. ITSs form the basis for all individual training in Functional Learning Centers (FLC) and units. They are written for all MOSs in order to specify the critical skills required by units of their individual Marines in support of the unit's combat missions as defined in the unit's Mission Essential Task List (METL).

b. FLC directors are responsible for reviewing all ITSs marked for initial training at the FLC. They must conduct courses of instruction on those ITSs appropriate for their student populations in terms of grade or rank. The task portion of each ITS taught in a given course must appear in the Task List (Item 24) of the CDD for that course. In accordance with the Systems Approach to Training (SAT), a Program of Instruction (POI) must also be developed for the course.

c. ITSs provide measures of performance that can be used by unit commanders to diagnose individual deficiencies and design training. Noted deficiencies should be scheduled for remediation on training plans or through Managed On-The-Job Training (MOJT), as appropriate.

d. A Marine should continue to receive instruction on ITSs that support the unit's METL. Individual training cannot cease upon graduation from the FLC because FLCs cannot prepare every Marine to serve in every billet. Individuals should be given opportunities in the unit to gain experience and responsibility as quickly as possible.

2. ITS Maintenance

a. A relationship exists between ITSs and the threat to Marine forces. Changes in the threat often trigger corresponding changes in our weapons, equipment, or doctrine, which then necessitate producing new or updated training standards. Such action requires a team effort on the part of the operating forces, the FLCs, and staff agencies at both Headquarters, U.S. Marine Corps and the Marine Corps Combat Development Command (MCCDC).

b. ITSs are ultimately validated by unit commanders and FLC directors. Records of Proceedings (ROP) resulting from Course Content Review Boards (CCRB) conducted by FLCs are particularly well suited for recommending revisions. The ROP should contain a justification for each proposed addition, deletion, or change and should accompany any request to obtain authority to depart from the currently published ITSs. Unit commanders can recommend changes through participation in a school's CCRB or directly via the chain of command. Unless significant changes warrant earlier action, ITS orders are revised and republished on a 4-year cycle.

c. ITS management is a dynamic process involving user maintenance as the key to refining standards to best serve unit missions. ITS users should evaluate whether ITSs support or fail to support an MOS, and ITS components should be examined for realism and pertinence. Users are encouraged to submit recommended changes to published ITSs through the chain of command.

SUMMARY/INDEX OF INDIVIDUAL TRAINING STANDARDS

1. General. This enclosure is a summary listing of all ITS tasks grouped by MOS and Duty Area.
2. Format. The columns are as follows:
 - a. SEQ. Sequence Number. This number dictates the order in which tasks for a given duty area are displayed.
 - b. TASK. ITS Designator. This is the permanent designator assigned to the task when it is created.
 - c. TITLE. ITS Task Title.
 - d. CORE. An "X" appears in this column when the task is designated as a "core" task required to "make" a Marine and qualify that Marine for the appropriate MOS. The absence of an "X" indicates that this is an advanced ("core plus") task that is mission, grade, or billet specific.
 - e. FLC. Functional Learning Center. An "X" appears in this column when the FLC is designated as the initial training setting. The absence of an "X" indicates that the initial training is accomplished through Managed On-The-Job Training (MOJT).
 - f. DL. Distance Learning Product. An "X" in this column indicates that at least one DL product is associated with this task. Consult enclosure (6) for details.
 - g. PST. Performance Support Tool. An "X" in this column indicates that at least one PST is associated with this task. Consult enclosure (6) for details.
 - h. SUS. Sustainment Training Period. An entry in this column represents the number of months between evaluation or retraining by the unit to maintain the proficiency required by the standard, provided the task supports the unit's METL.
 - i. REQ BY. Required By. An entry in this column depicts the lowest grade required to demonstrate proficiency in this task.
 - j. PAGE. Page Number. This column lists the number of the page in enclosure (6) that contains detailed information concerning this task.

AMMUNITION, EXPLOSIVES, AND PYROTECHNICS

1. General. This table summarizes (by DODIC and Nomenclature) the ammunition, explosives, and/or pyrotechnics required to properly train all ITSS associated with this OccFld.

2. Format. Beneath each type of ammunition, the following information is contained in columns along with any pertinent comments:

a. TASK. A listing of all ITS tasks requiring that type of ammunition for proper execution.

b. INITIAL PROFICIENCY. The number of rounds required to support the initial proficiency training of the corresponding task.

c. PER ITERATION. The number of rounds required to support one iteration of the task.

d. ANNUAL SUSTAINMENT. The number of rounds required to maintain proficiency in the task on an annual basis. This is determined by dividing the "sustainment period" into 12 months and multiplying the result by the "per iteration" factor.

INDIVIDUAL TRAINING STANDARDS

1. General. This enclosure contains all of the ITSs for this OccFld, grouped by MOS. Each MOS is contained in a separate Appendix to Enclosure (6).

2. Format. For each ITS, the following elements of information are provided:

a. TASK. The task describes a specific and necessary behavior expected of a Marine in a particular MOS or billet. It is a clearly stated, performance-oriented action requiring a learned skill. Skills that "make" a Marine or qualify that Marine for the appropriate MOS are designated as "CORE." Those advanced skills that are mission, grade, or billet specific are designated as "CORE PLUS."

b. CONDITION(S). This portion of the ITS describes the equipment, manuals, assistance/supervision, special physical demands, environmental conditions, and location affecting a Marine's performance of the task under real-world circumstances.

c. STANDARD(S). This portion of the ITS describes the level of proficiency to which the individual must perform the task.

d. PERFORMANCE STEPS. Collectively, the performance steps represent the logical sequence of actions required of the Marine to perform the task to standard. These actions are typically detailed in the references.

e. INITIAL TRAINING SETTING. All ITSs are assigned an initial training setting that includes a specific location for initial instruction [Functional Learning Center (FLC) or Managed On-The-Job Training (MOJT)], a sustainment factor (number of months between evaluation or retraining to maintain the proficiency required by the standard), and a "Required By" grade (the lowest grade at which task proficiency is required).

f. REFERENCE(S). References are doctrinal publications, technical manuals, and other publications upon which the ITS and its performance steps are based. They should be readily available and provide detail to the procedures that are only summarized in the performance steps.

g. TRAINING MATERIEL (Optional). Training materiel includes all training devices, simulators, aids, equipment, and materials [except ammunition, distance learning (DL) products, and performance support tools (PST)] required or recommended to properly train the task under the specified conditions and to the specified standard. Mandatory items are preceded by an asterisk(*)

h. AMMUNITION (Optional). This table, if present, depicts the ammunition, explosives, and/or pyrotechnics required for proper training of the ITS.

i. DISTANCE LEARNING PRODUCT(S) (Optional). This section includes a list of any currently available or planned DL products designed to provide training related to this task.

j. PERFORMANCE SUPPORT TOOL(S) (Optional). This section includes a list of any currently available or planned PSTs designed to provide training related to this task.

k. ADMINISTRATIVE INSTRUCTIONS (Optional). Administrative instructions provide the trainer/instructor with special required or recommended circumstances, including safety precautions, relating to the training or execution of the task. These instructions may also clarify the meaning of the task.

MOS 5803, MILITARY POLICE OFFICER

DUTY AREA 01 - OPERATIONS

TASK: 5803.01.01 (CORE) PLAN LAW ENFORCEMENT OPERATIONS

CONDITION(S): Given a law enforcement mission, military police personnel, standard equipment, and commander's guidance.

STANDARD(S): In accordance with the references.

PERFORMANCE STEPS:

1. Determine mission requirements.
2. Determine the concept/type of operation.
3. Determine military police personnel requirements.
4. Assign military police personnel specific missions, to include patrol areas.
5. Evaluate resource options.
6. Plan for special considerations.
7. Evaluate all plans and considerations.
8. Prepare the plan for written or verbal presentation.

INITIAL TRAINING SETTING: FLC Sustainment: 12 Req By: 2ndLt

2. * Map, map overlay paper, protractor, grease/alcohol marker(s)
3. Pin map and stick pins

TASK: 5803.01.02 (CORE) SUPERVISE LAW ENFORCEMENT OPERATIONS

CONDITION(S): Given a law enforcement mission, military police personnel, equipment, and appropriate orders.

STANDARD(S): In accordance with the references.

PERFORMANCE STEPS:

1. Continually evaluate the mission.
2. Ensure resources are obtained and available.
3. Supervise military police personnel and employment of resources.
4. Continually evaluate progress of operation. Adjust operations/plan as required.
5. Prepare after action report (if applicable)
 - a. Review references.
 - b. Organize notes, and other information in logical progression.
 - c. Pick out pertinent details.
 - d. Write rough outline.
 - e. Write report.
 - f. Submit smooth report via the chain of command.

TASK: 5803.01.03 (CORE PLUS) PLAN SURVEILLANCE

CONDITION(S): Given target suspect(s) and/or target area, suspected violation or activity, T/O personnel, T/E equipment, and applicable orders and references.

STANDARD(S): Per the references.

PERFORMANCE STEPS:

1. Determine mission requirements.
2. Determine the concept of operation.
 - a. Fixed surveillance.
 - b. Mobile surveillance.
3. Determine personnel requirements.
4. Evaluate resource options.
5. Plan for special considerations.
6. Evaluate all plans and considerations.
7. Prepare the plan for written or verbal presentation.
8. Present the plan.

7. * Radio, military police
8. Radio, call signs, and frequencies
9. Vehicle(s)

TASK: 5803.01.04 (CORE) DEVELOP RESPONSE PLANS

CONDITION(S): Given a facility, information regarding the facility's mission, and appropriate administrative supplies.

STANDARD(S): Per the references.

PERFORMANCE STEPS:

1. Analyze degree of protection necessary.
2. Determine what force may be used.
3. Obtain maps and floor plans of the area.
4. Check with base public works on construction materials of building.
5. Conduct a visit to the site.
 - a. Check any physical barriers.
 - b. Check any visual barriers.
 - c. Plot barriers on map.
6. Determine best location for patrol response positions.
7. Test plan with actual patrol units.
8. Make adjustments to plan.
9. Submit plan.

TASK: 5803.01.05 (CORE) SUPERVISE THE EMPLOYMENT OF AN EMERGENCY RESPONSE FORCE

CONDITION(S): As the on scene commander, given an emergency response scenario and trained, equipped law enforcement personnel.

STANDARD(S): In accordance with applicable references.

PERFORMANCE STEPS:

1. Review response plan, if applicable, for response location.
2. Ensure personnel have proper equipment.
3. Review MAP en-route.
4. Establish inner perimeter locations for each member (or team) on map.
5. Establish on scene command post.
6. Check communications.
7. Post personnel to cordon off area, and establish inner perimeter.
8. Establish control over the situation.
9. Adjust personnel locations as needed.
10. Report to Provost Marshal for further instructions.
11. Bomb threat response:
 - a. Ensure that no radio transmissions are made.
 - b. Ensure evacuation is in progress.
 - c. Ensure a cordon has been established; move personnel to a minimum of 100 meters distance from site.
 - d. Gather information from bystanders, if possible.
 - e. Direct Explosive Dog Teams and/or Explosive Ordnance Disposal (EOD) Team personnel as appropriate.
 - f. Establish and maintain crowd control while search is in progress.
 - g. Once building/structure is cleared, ensure an orderly flow of traffic and personnel is restored.

TASK: 5803.05.05 (CORE) PERFORM ROUTE RECONNAISSANCE AND SURVEILLANCE

CONDITION(S): Given an operation order, commander's guidance, personnel, and T/E.

STANDARD(S): In accordance with applicable references.

PERFORMANCE STEPS:

1. Conduct a mission analysis:
 - a. Specified tasks.
 - b. Implied tasks.
2. Conduct liaison with:
 - a. Local S-2/G-2 (Intelligence Section) for current route conditions.
 - b. Engineer Units for current route conditions.
 - c. Host nation law enforcement.
3. Conduct map reconnaissance - (KOCOA).
4. Issue Warning Order.
5. Establish tactical control measures for patrol movement, and patrol fire support plan.
6. Coordinate with higher headquarters:
 - a. Planned routes, tactical control measures, fire support plan, etc.
 - b. Communications plan (frequencies, callsigns, radio check times, etc.)
 - c. Time of departure and return.

- d. Adjacent headquarters and units are informed of mission.
- 7. Ensure necessary equipment and ammunition are on hand and issued.
- 8. Essential elements of information required to provide appropriate security, by observation, measurement, and computing:
 - a. Limiting characteristics of the road.
 - 1) Sharp curves with a radius less than 30 meters/100 feet (also reported as an obstruction).
 - 2) Steep gradients that are 7 percent or steeper (also reported as an obstruction).
 - 3) Poor drainage such as inadequate or blocked ditches, crown or camber, or culverts.
 - 4) Weak foundations due to unstable, loose, or easily displaced material.
 - 5) A road surface that is bumpy, rutted, or potholed to an extent that it will reduce vehicle speeds.
 - 6) Excessive camber or super elevation that falls away so sharply as to cause heavy vehicles to skid or drag the shoulders.
 - b. Route widths and conditions of shoulders. Width is expressed in meters or feet, and is a measure of the traveled way and the traveled way plus the shoulders.
 - c. Road surface materials.
 - d. Road length from the start to finish of that part of the road actually reconnoitered.
 - e. Obstructions which restrict the type, amount, or speed of the traffic flow.
 - f. Any special weather conditions effecting the road, such as snow blockage or flooding.
 - g. Additional information such as the civil and military designation of the road, cover and concealment, possibilities of off route movement, and any other information which is appropriate or was requested in the reconnaissance instructions.
 - h. Determine route type.
 - 1) "All Weather" (Type X), one which with reasonable maintenance, is passable throughout the year to a volume of traffic never appreciably less than its maximum capacity.
 - 2) "Limited All Weather" (Type Y), which is any road that with reasonable maintenance, can be kept open in bad weather to a volume of traffic which is considerably less than its normal capacity. One that is effected by

rain, frost, or thaw.

3) "Fair Weather" (Type Z), which becomes quickly impassable in bad weather and which cannot be kept open by normal maintenance. One seriously effected by rain, frost, or thaw.

i. Determine the military route classification, which is normally the lowest one-way bridge load classification along the route. If no bridge exists, the worst section of the route governs.

9. Essential elements of information to be gathered on bridges during the reconnaissance mission:

a. The horizontal clearance which is the minimum clear distance between the inside edges of the bridge structure from a height of 1 foot above the roadway surface and upwards.

b. The under bridge clearance which is the maximum clear distance between the underside of the bridge and the surface of the ground or of the water. If the water is tidal, the date-time-group of the measurements must be included.

c. The number, material, and type of span construction for each span.

d. The length and conditions of individual spans. Note any damaged spans as being either capable of supporting light vehicles, or impassable to traffic but not totally destroyed, or being totally destroyed.

e. The overall length of the bridge.

f. The width of the roadway across the bridge.

g. Overhead clearance measured from the left shoulder, center of roadway, and right shoulder.

h. The bridge bypass overall potential.

1) Bypass easy when obstacles can be crossed within the immediate vicinity of the bridge without work to improve the bypass.

2) Obstacles can be crossed within the immediate vicinity of the bridge, but some work will be necessary to prepare the bypass.

3) Bypass impossible and the crossing of the obstacles is only possible by a detour some distance from the original site.

i. Determine the military load classification of the bridge using a bridge classification card.

10. Brief the Commander.

11. Conduct operational checks of equipment. (Radios, vehicles, etc).

12. Conduct patrol rehearsals.

a. Movement: To, On, In, and From the objective.

b. Immediate Action Drills.

13. Conduct security mission.
14. Debrief upon return from mission.

ADMINISTRATIVE INSTRUCTIONS:

1. This task is simulated using Marines as EPW's/CI's.

TASK: 5811.04.08 (CORE PLUS) SELECT MACHINEGUN FIRING POSITIONS

CONDITION(S): Given a machinegun, an MP team, and a tactical vehicle with machinegun mount in a tactical environment.

STANDARD(S): Per the references.

PERFORMANCE STEPS:

1. Conduct a reconnaissance of the assigned area: if the situation permits, walk the ground in front of the FEBA. If the situation does not permit, approach the position from the rear or flank.
2. Determine avenues of approach and any dead spaces in front of friendly lines.
3. Designate a general firing position based on the scheme of maneuver.
 - a. Avoid noticeable terrain features.
 - b. Look for mounted firing positions.
 - c. Ensure positions cover the sector of fire.
 - d. Choose a dismounted firing position if the terrain prevents the vehicle from moving to the positions or if the vehicle cannot be concealed.
 - e. Choose positions that have as much cover and concealment as possible.

TASK: 5811.04.09 (CORE PLUS) CONSTRUCT A MACHINEGUN POSITION

CONDITION(S): Provided an M240G/M2/MK19 machinegun, assistant gunner, sector of fire, entrenchment tools, sand bags, posted security, and selected firing position.

STANDARD(S): Per the references.

PERFORMANCE STEPS:

1. Position tripod.
2. Clear fields of fire.

3. Prepare hasty position.
4. Mark dimensions of hole.
5. Place limiting stakes.
6. Construct fighting hole with water sump, grenade sump, and parapet.
7. Construct overhead cover.
8. Camouflage the position.

2. Crew serve weapons SL3 complete (M240G, M2 50 cal, Mk 19)
3. * Entrenching tool
4. * Sand bags

ADMINISTRATIVE INSTRUCTIONS:

1. Training Steps 1 through 4 must be performed sequential.
2. The position should afford natural cover such as mounds of earth, stumps, trees, etc., whenever possible.
3. The School of Infantry will only give students familiarization instruction (lesson purpose) on this task.

TASK: 5811.04.10 (CORE PLUS) LAY A MACHINEGUN

CONDITION(S): The Marine acting as gunner, is provided a M240G or M2 machine gun, field fire range with target, designated primary sector of fire, designated secondary sector of fire, log (wooden), E-tool, luminous tape, notched stakes or substitute, wooden stakes, compass, and 50 rounds of ammunition.

STANDARD(S): Per the references.

PERFORMANCE STEPS:

1. The M2 compass method

- a. Clear weapon
 - b. Determine range and direction to the target/target area.
 - c. Determine quadrant elevation (QE).
 - d. Place M2 compass on the flat portion of the feed tray cover, and align the gun for direction.
 - e. With the M2 compass still resting on the flat portion of the feed tray, adjust the gun for elevation by duplicating the computed QE angle on the compass.
 - f. Record T&E data on range card.
2. Laying on final protective lines (FPL).
- a. Clear the weapon
 - b. Center the traversing hand wheel and zero the elevating hand wheel.
 - c. Determine along which limit of the sector of fire the FPL is to lie, and set the traversing slide toward the end of the traversing bar which is opposite the direction of the FPL.
 - d. Adjust the tripod to align the gun in the direction of the line.
 - e. If a zero line is used instead of a FPL, center the traversing slide at zero on the traversing bar scale, then lift the rear legs of the tripod and align the gun on the designated line. The traversing bar reading of zero is indicated on the range card.
 - f. Sight the gun on an aiming point along the FPL or zero line at a range of approximately 700 meters.
 - g. Walk the FPL to determine the extent of grazing fire and the precise location of dead space.
 - h. For irregularly sloping ground, select an aiming point on the ground near the break in the uniform slope, lay the gun on that point and elevate it two mils.
 - i. Record elevation data on range card.
3. Laying on principal direction of fire (PDF).
- a. Clear weapon
 - b. Center the traversing slide at zero on the traversing bar scale, zero the traversing hand wheel, and zero the elevating hand wheel.
 - c. Adjust the tripod to align the gun in the direction of the line.
 - d. Sight the gun on an aiming point at the near end of the PDF.
 - e. Adjust the center of impact onto the near end of the PDF, and search and

traverse to cover the entire target area.

f. Establish a firing sequence, and record the number of mils of search and traverse on the range card.

4. Field expedient methods.

a. Base stake method

- (1) Clear weapon.
- (2) Determine sector limits and place stakes.
- (3) Set the rear sight slide at the estimated range to the target, FPL or PDF.
- (4) Align the sights on the target, and mark a spot on the ground under the gas cylinder extension.
- (5) Move the gun barrel aside and place the stake into the ground.
- (6) Drive the stake into the ground until the sights are again laid on the target when the gas cylinder is laid on top of the stake.

b. Aiming stake method.

- (1) Clear weapon.
- (2) Place a strip of luminous tape or paint at least halfway up the rear of the front sight post and on the top of the stake.
- (3) Raise the rear sight slide to its uppermost position.
- (4) Align the stake and gun on the target for direction and elevation.
- (5) Place stake (one per target).

c. Horizontal log method.

- (1) Clear weapon.
- (2) Determine sector limits and place stakes.
- (3) Determine proper elevation to obtain grazing fire across the front.
- (4) Place a log or board between the sector stakes in such a way that the barrel will be at the proper elevation to obtain grazing fire. Note that in this case the tripod is used, but not the T&E mechanism.

d. Notched stake method.

- (1) Clear the weapon.
- (2) Aim the gun toward a preselected target area.
- (3) Place the stock of the weapon in the rests of notched stakes or tree crotches, and make final adjustments to hit the desired target area.

(4) Dig shallow trenches or grooves for the bipod feet to permit rotation of the bipod feet as the stock is moved from one crotch or stake to another.

(5) Hold the weapon, sight it, and fire it using the position and grip employed in bipod firing.

(6) To ensure that the gun is correctly laid on the target(s), fire a confirming burst if the tactical situation permits.

e. Auxiliary aiming point method. Note that this method may be used when the auxiliary aiming point is not more than 10 mils for the light machinegun or 20 mils off the gun target line for the heavy machinegun.

(1) Clear the weapon.

(2) Select an aiming point visible from the gun position (preferably at a point which has a greater range than the target, and within 10/20 mils of the gun target line) and determine the range to the target as accurately as possible.

(3) Using binoculars, measure the vertical angle to the base of the target, and determine the lateral deviation in mils from the aiming point to the center of the target.

(4) Lay the gun on the aiming point with the rear sight setting for the gun/target range.

(5) Manipulate the gun through the number of mils measured in the vertical angle from the aiming point to the base of the target.

(6) When the aiming point is off the gun-target line, deflection in mils may be taken with the windage arc (not over 10/20 mils), or compensated for by manipulating the traversing hand wheel.

2. MCWP 3-15.1, Machine Guns and Machinegun Gunnery
3. MCWP 3-34.1, Employment of Military Police in Support of the MAGTF

TRAINING MATERIEL:

1. Crew serve weapons SL3 complete (M240G, M2 50 cal, Mk 19)
2. Entrenching tool
3. Sand bags

ADMINISTRATIVE INSTRUCTIONS:

1. Aiming/elevation stakes are normally used only in the secondary sector of fire.
2. The secondary sector will normally be fired into, when necessary, by using the bipod. The tripod, once positioned for fire into the primary sector, should not be moved.
3. Aiming stakes will be solidly placed at the gun position so that the gun barrel can be placed on top of the aiming stake, thereby aligning the gun on the target. The stake will also be driven in the ground to the correct height to provide the correct elevation of the gun barrel when engaging a target.

TASK: 5811.04.11 (CORE PLUS) PREPARE RANGE CARD

CONDITION(S): During daylight, in a defensive fighting position, given a tripod-mounted M240G/M2/MK19 machinegun with components, a designated primary sector of fire, final protective line (FPL) or principal direction of fire (PDF), and secondary sector of fire (both with recognizable targets), paper, pencil, and military compass

STANDARD(S): The range card must be prepared within 15 minutes for each position per the references.

PERFORMANCE STEPS:

1. In the lower center of the range card indicate the firing position by drawing in the appropriate military symbol of the machinegun being employed.
2. Draw a rough sketch of the terrain to the front of the position. Include prominent natural and manmade features that could be likely targets, and center the machinegun position at the bottom of the sketch.
3. Use the military compass to determine magnetic north, and sketch in the magnetic north symbol.
4. Fill in gun number (or squad), unit designation (platoon and company), and date.
5. Determine the location of the gun position in relation to a prominent terrain feature, such as a hilltop, road junction, or building. If no feature exists, place the eight-digit map coordinates of the position near the point where it was determined the gun position should be. If there is a prominent terrain feature within 1,000 meters of the gun, use that feature.
 - a. Using a compass, determine the azimuth in mils or degrees from the terrain feature to the gun position, or from the gun position to the terrain feature. (Compute the back azimuth from the gun to the feature by adding or subtracting 3,200 mils or 180 degrees.)
 - b. Determine the distance between the gun and the feature by pacing or from a map.
 - c. Sketch in the terrain feature on the card in the lower left or right hand corner (whichever is closest to its actual direction on the ground) and identify it.

d. Connect the sketch of the position and the terrain feature with a barbed line extended from the feature to the gun or from the gun to the feature.

e. Record above the line the distance in meters.

f. Record below the line the azimuth in mils or degrees from the terrain feature to the gun. The arrow's barb indicate the direction the azimuth was taken.

6. Sketch in primary sector of fire with a PDF or a FPL.

a. Sketch in the limits of the primary sector of fire as assigned. The sector should not exceed the maximum traverse of the tripod mounted machinegun (875 mils for the tripod-mounted M240G and 800 mils for the tripod-mounted M2/MK19).

b. Sketch in the symbol for an automatic weapon oriented on the most dangerous target within the sector (as designated).

c. Primary sector with a FPL.

(1) Sketch in limits of the primary sector of fire as assigned. (Sector should not exceed 875/800 mils.)

(2) Sketch in FPL on sector limit as assigned by the leader. Have someone walk the FPL (if enemy situation permits) and determine dead space. Show dead space on sketch by a break in the symbol for an FPL, and write in the range to the beginning and end of the dead space. Write in maximum range of graze (600 meters for the M240G or 1000 meters for the M2, if no sharp rise or fall in terrain at a closer range). The FPL should be assigned only if a good sharp rise or fall in terrain at a closer range). The FPL should be assigned only if a good distance of graze can be obtained. When such a line of fire exists, the primary sector will be assigned, based on it, with the FPL being the sector limit closest to friendly troops. If an FPL cannot be identified, a PDF must be assigned.

7. Label targets in the primary sector in order of priority.

8. Sketch in secondary sector of fire and label targets within the secondary sector with the range in meters from the gun to each target.

9. Prepare the data section using the T&E mechanism.

a. On the same side of the card and below the sketch, complete the data section block.

(1) Center the traversing hand wheel and lay the gun for direction.

(2) When assigned an FPL, lock traversing slide on extreme left or right of bar, depending on which side of primary sector FPL is on. Then align barrel on FPL by moving tripod legs. No direction entry needed in data section.

(3) When assigned a PDF, align on primary sector by traversing slide to one side and then move the tripod to align the barrel on the sector limit. Align on PDF by traversing the slide until the machine gun is aimed on the center of the target.

- (4) Fix tripod legs in place by digging in or sandbagging.
- b. Read the direction to each target.
 - (1) Lay the gun on the base of the target.
 - (2) Read the direction directly off the traversing bar at the left edge of the traversing bar slide.
 - (3) Right or left reading is determined by direction of barrel (just the opposite of the slide).
- c. Read elevation for each target.
 - (1) Lay the gun on the base of the target by rotating the elevation hand wheel.
 - (2) Read the number above the first visible line on the elevating scale.
 - (3) Read the number in line with the indicator off the elevating hand wheel.
 - (4) Enter that reading under the elevation column of the range card data section, separating the two numbers with a slash. Always enter the reading from the upper elevating screw scale plate first.
- d. Enter the range to each target under the appropriate column in the data section.
- e. Fill in a remarks column for each target as needed.
 - (1) Enter the width and depth (in mils) of linear targets.
 - (2) When entering the target width, be sure to give the width in mils and express it as two values. The first value is the actual width of the target, the second value is the number of mils of traverse needed to cover the target.
 - (3) No data for the secondary sector will be determined, since the gun will be fired in the bipod role. Since the M2/MK19 do not have bi-pods, the secondary sector of fire will be marked by aiming stakes.
10. Prepare the card in two copies; keep one copy at the weapon and send the other to the unit commander.

ENCLOSURE (6)

ADMINISTRATIVE INSTRUCTIONS:

1. The gunner, aided by the assistant gunner, must prepare the range card. Range cards are prepared immediately upon arrival in a position, regardless of the anticipated length of stay, and should be continually revised throughout the occupation of a position. The standard military symbols are used in preparing a range card.
2. A guide to training for this task can be found under "range card exercise" found in the references.

TASK: 5811.04.12 (CORE PLUS) ENGAGE TARGETS WITH THE MACHINEGUN

CONDITION(S): In a field environment, given a M240G/M2/MK19 machinegun, 400/100/50 rounds of ammunition, an assistant-gunner, a point target, a linear target (less than 50 mils wide with a depth no greater than the beaten zone), a wide target (greater than 50 mils), a deep target, a target that is both wide and deep (oblique), and an area target. Target ranges must vary from 300 meters to the maximum effective range of the machinegun being employed. There must be a mixture of moving and stationary targets.

STANDARD(S): For the M240G/M2 the gunner must place effective fire on each target using the appropriate method of target engagement as specified in the performance steps. For the MK19 the gunner must place effective fire on stationary targets within 6 rounds per target and on moving targets within 9 rounds per target, using the appropriate method of engagement as specified in the performance steps. Targets will be engaged in burst of 5 to 7 for the M240G, 6 to 9 for the M2, and 3 to 5 for the MK19, per the references.

PERFORMANCE STEPS:

1. Method of engaging point targets (target width and depth no greater than the beaten zone for the range and ground on which they are located).
 - a. Set rear sight for announced or previously determined range.
 - b. Lay the gun on the target with the correct sight setting to hit the target.
 - c. On command, engage the target with fixed fire.
 - d. After initial burst of fixed fire, follow any movement or change in formation by the enemy by manipulation of the T&E mechanism.
2. Method of engaging linear target less than 50 mils in width with a depth less than the extent of the beaten zone (range dependent).
 - a. Set rear sight for announced or previously determined range.
 - b. Lay the gun on appropriate flank of the target (i.e., gun 1 lays on right flank, gun 2 lays on left flank).
 - c. On command, deliver initial burst and adjust on aiming point.
 - d. Traverse across the target to a point 2 mils outside the other flank.
 - e. Traverse back and forth covering the entire target until the cease fire is given.

3. Method of engaging wide target (greater than 50 mils in width), with a depth less than the extent of the beaten zone.

- a. Set rear sight for announced or previously determined range.
- b. Lay the gun on appropriate flank of the target.
- c. On command, deliver initial burst and adjust on aiming point.

d. Traverse across assigned half (or any other portion as designated by the squad leader) of the target, to a point 2 mils outside the left/right point of division.

e. Traverse back and forth covering the entire assigned portion of the target until cease fire is given.

4. Method of engaging deep targets when the ends are visible to the gunner.

a. Set the rear sight for announced or previously determined range (range to midpoint of the target).

b. Lay the gun on appropriate end of the target; i.e., gun 1 is laid initially on the near end of the target, gun 2 is laid initially on the far end.

c. On command deliver initial burst and adjust on aiming point.

d. Search the full extent of the target, up and down, until the cease fire is given.

5. Method of engaging deep targets when the ends are invisible to the gunners.

a. Ends may be designated by firing a gun or rifle tracer round.

b. Ends may be identified by designating an initial aiming point within the target area. Both guns set rear sights at the range to the reference point. Initial burst is adjusted on this point. The gun is then searched up and down until it has reached the far or near end. The direction of search is then reversed.

c. Ends may be identified using the computed search method. Angles of elevation from the reference point are determined using the firing tables.

6. Method of engaging deep targets when the targets are moving rapidly.

a. When the target is moving rapidly away from the gun position the gun is laid on the far end with the range to that point and searched down.

b. When the target is moving rapidly toward the gun position the gun is laid on the near end with the range to that point and searched up.

7. Method of engaging wide and deep (oblique) targets.

a. Gunner employs both searching and traversing fire.

b. Range setting, aiming points, and subdivision of the target are designated in the same manner as previously described for engagement of linear, wide, and deep targets.

8. Method of engaging area targets.

- a. Set rear sight for announced or previously determined range.
- b. When flanks are visible, lay the gun on the designated flank. When flanks are invisible, lay the gun on the designated reference point, or location identified by the tracer.
- c. On command deliver initial burst and adjust on aiming point.
- d. Traverse across the target or target area (or assigned portion of target), make elevation change as prescribed in the initial fire command, traverse back to the flank from which traversing fire was started, and cease fire.

TASK: 5811.04.13 (CORE PLUS) FUNCTION AS AN ASSISTANT GUNNER FOR A MACHINEGUN

CONDITION(S): Acting as a machinegun assistant gunner, in a machinegun team, with tripod, ammunition, and a selected position on the ground.

STANDARD(S): Per the references.

PERFORMANCE STEPS:

1. Inspect the ammunition to ensure that it is properly linked, free of dirt and corrosion, and that it is ready for loading. Ensure the ammunition is serviceable.
2. Inspect the tripod to ensure it is serviceable, and free of all dirt and corrosion.
3. Set the tripod trail legs and front leg, and place the tripod on the ground with the front leg pointing in the direction of fire.
4. Ensure the tripod legs have been secured by having the metal shoe on each leg stamped into the ground.
5. If operating as the assistant gunner for an M240G machinegun.
 - a. Assume a prone position on the left side of the tripod.
 - b. Assist the gunner when placing the T&E mechanism on the gun.
 - c. Remove the ammunition and feed it into the weapon (with cover raised and closed).
 - d. Hold the ammunition belt 6 to 8 inches away from the feed-way and allow the ammunition belt to feed freely into the gun.
 - e. Observe the impact of the rounds and give the gunner adjustment commands.
 - f. When changing barrels, place the asbestos mitten on the left hand, remove the barrel and replace it with the spare barrel.
 - g. When taking the gun out of action, remove the ammunition from the gun and secure it.
 - h. Remove the T&E mechanism.
6. If operating as the assistant gunner for an M2 machinegun.
 - a. Assume a prone position behind the tripod.

- b. Holding the left spade grip with the right hand, use the left hand to attach the T&E mechanism to the traversing bar.
 - c. Assume a semi-prone position to the left of the gun.
 - d. Remove the ammunition and insert the double looped end into the feed-way.
 - e. Ensure the cover is closed.
 - f. When taking the gun out of action, remove the ammunition from the gun and secure it.
7. If operating as the assistant gunner for an MK19 machinegun.
- a. Mount the M64 MOD 7 gun cradle onto the tripod.
 - b. Attach the T&E mechanism to the traversing bar on the tripod.
 - c. Assist the gunner in mounting the gun onto the cradle.
 - d. Attach the T&E mechanism to the cradle.
 - e. Remove the ammunition and insert the female link first into the feeder.
 - f. Push the round across the feed pawl and move the feeder slide assembly to the left.
 - g. Raise the rear sight.
 - h. When taking the gun out of action, remove the ammunition from the gun and secure it.
 - i. Remove the T&E mechanism and cradle.
8. Fold the tripod's trail legs and move with the machinegun team to the next position.

TASK: 5811.04.14 (CORE PLUS) DIRECT MAINTENANCE OF THE MACHINEGUN

CONDITION(S): Acting as the machinegun team/squad/section leader, and given a machinegun team/squad/section, weapons, cleaning gear, and lubricants; during day light or darkness.

STANDARD(S): Per the references.

PERFORMANCE STEPS:

1. Ensure all weapons are clear.
2. Determine what weapons need to be maintained, and when and where the maintenance will occur.
3. Identify all problem areas and their causes, if possible.
4. Ensure the proper equipment, cleaning gear, and lubricants are available in sufficient amounts.
5. Assign tasks.
6. Brief the Marines on the maintenance to be performed and the standards to be met.
7. Ensure each weapon has all its components.
8. Ensure the weapons are disassembled into the proper groups.
9. Inspect the work for cleanliness and proper mechanical condition, point out corrections, if needed.
10. Inspect the weapons to ensure they are properly lubricated for the local climate condition.
11. Ensure the weapons are assembled properly.
12. Perform a functions check.
13. Ensure the pintle and platform group, tripod, and traversing and elevating mechanism of each gun is cleaned and lubricated, and that all parts function properly.
14. Inspect the ammunition to ensure it is clean dry, and not coated with oil.
15. Ensure the gun books are properly filled out.
16. When the Marines are maintaining the AN/TVS-5 for the M2/MK19 machinegun.
 - a. Ensure the lenses are properly cleaned.
 - b. Ensure that the sight and its storage gear are free of dirt and foreign matter.
 - c. Ensure that each sight functions properly.

17. Inform the immediate supervisor of the status of the maintenance.

CONDITION(S): Given a tactical scenario in any combat environment (day or night), an M203 grenade launcher, all individual combat equipment (782 gear), and ammunition.

STANDARD(S): The Marine must effectively engage targets with the M203 grenade launcher using both the leaf and quadrant sights, per the references.

PERFORMANCE STEPS:

1. Handle the weapon according to basic weapons handling procedures.
2. Prepare the M203 for firing:
 - a. Ensure the M203 is properly assembled and functioning for firing.
 - b. Select the appropriate ammunition.
 - c. Load the M203.
 - d. Field zero the M203.
3. Estimate the range to target.
4. Respond to fire commands.

MOS 5815, SPECIAL REACTION TEAM (SRT) MEMBER

DUTY AREA 01 - SPECIAL REACTION TEAM (SRT) MARKSMANSHIP

The SRT member must possess all the qualifications and capabilities of a Marine Corps Military Policeman. An SRT member is required to be physically and mentally capable of enduring the rigors of High Risk Law Enforcement Operations and tactics in confined spaces.

TASK: 5815.01.01 (CORE) ENGAGE TARGET(S) WITH THE SERVICE PISTOL

CONDITION(S): Given a service pistol, SRT qualifications standards, ammunition, SRT tactical equipment, and targets, using controlled fire techniques from a stationary position and while moving at known and unknown distances during normal and limited visibility.

STANDARD(S): Accurately per the references.

PERFORMANCE STEPS:

1. Handle the weapon safely.
 - a. Four safety rules.
 - b. Weapon conditions.
 - c. Immediate action/remedial action, as required.
2. Prepare service pistol for firing.
 - a. Charge magazines.
 - b. Load pistol.
 - c. Make pistol ready for firing.
3. Assume the appropriate stationary firing position to accurately engage stationary and moving targets during normal and limited visibility.
4. Engage stationary and moving targets while moving during normal and limited visibility.
5. Assess target engagements:
 - a. Analyze results.
 - b. Make appropriate corrections.

STANDARD(S): Per the references.

PERFORMANCE STEPS:

1. Handle the weapon safely.
 - a. Four safety rules.
 - b. Weapons conditions.
 - c. Immediate action/remedial action, as required.
2. Place sights on initial sight setting.
 - a. Set base of front sight post flush with front housing or leave at last known setting.
 - b. Set rear sight elevation at 3.
 - c. Set rear windage at center.
3. Adjust sling to enhance a stable shooting position.
4. Assume prone firing position.
 - a. Three elements of a rifle firing position.
 - b. Seven factors common to all rifle firing positions.
5. Prepare for firing.
 - a. Load the M-4/MP-5N.
 - b. Make the M-4/MP-5N ready for firing.
6. Fire three well aimed shots while applying the fundamentals of marksmanship.
 - a. Proper aim.
 - b. Breath control.
 - c. Trigger control.
7. Analyze data.
 - a. Determine the center of the shot group (triangulation).
 - b. Determine distance, in inches, from point of aim to center of group, both vertically and horizontally.
8. Apply required adjustments to M-4/MP-5N sights.

9. Fire a second zeroing group.
10. Analyze data (again).
 - a. Determine the center of the shot group (triangulation).
 - b. Determine distance, in inches, from point of aim to center of group, both vertically and horizontally.

TASK: 5815.03.02 (CORE) EXECUTE OBJECTIVE RECONNAISSANCE

CONDITION(S): Given a scenario, objective, SRT equipment, and weapons

STANDARD(S): Per the references.

PERFORMANCE STEPS:

1. Conduct surveillance and recon of objective.
2. Interpret reconnaissance and surveillance information.
3. Brief reconnaissance and surveillance to team leader.

INITIAL TRAINING SETTING: FLC Sustainment: 3 Req By: LCpl

REFERENCE(S):

1. Guidebook for High Risk Incident Operations (DRAFT)
2. Installation Special Reaction Team (SRT) Standing Operating Procedure (SOP)
3. FMFM 2-1, Intelligence
4. FMFM 6-5, Marine Rifle Squad
5. FMFM 6-7, Scouting and Patrolling for Infantry Units
6. FMFRP 0-6, Marine Troop Leader's Guide

TRAINING MATERIEL:

1. * Appropriate facility blueprint/floor plans
2. Field sketch
3. Hand irons with keys and/or flex cuffs
4. * Map, topographic
5. * Military compass, magnetic
6. Night vision device(s)
7. * Radio(s), tactical with or without encryption
8. Radio, military police
9. Radio, call signs, and frequencies

10. Service pistol, SL-3 complete
11. Service shotgun, SL-3 complete
12. * Special Reaction Team T/O equipment
13. Targets, stationary and moving
14. Wire cutter

TASK: 5815.03.03 (CORE PLUS) CONDUCT AN ASSAULT REHEARSAL

CONDITION(S): As a team leader, given an assault mission scenario, assault plan, SRT equipment, and weapons.

STANDARD(S): Per the references.

PERFORMANCE STEPS:

1. Request/select a rehearsal site.
2. Review the reconstruction data.
3. Reconstruct the objective.
4. Review the assault plan.
5. Conduct a brief back.
6. Conduct the rehearsal.
7. Check equipment.

9. Service pistol, SL-3 complete
10. Service shotgun, SL-3 complete
11. * Special Reaction Team T/O equipment
12. * Targets, stationary and moving
13. Task Organization (T/O)

ADMINISTRATIVE INSTRUCTIONS:

1. Reconstruction data should consist of photos, blueprints, maps, and examination of the reconstructed objective site by personnel familiar with the true objective site.
2. Reconstruction will be accomplished by team members using any material available. At a minimum, engineer tape should be provided.
3. Reconstruction improvement will be conducted as new intelligence is provided to the team, if scenario events allow.
4. The Brief back will include each team member's review of his responsibilities.

DUTY AREA 04 - SPECIAL REACTION TEAM (SRT) BREACHING TECHNIQUES

The decision as to whether or not the installation SRT will possess an explosive breaching capability will be made by the installation commander or Provost Marshal. If a decision is made to possess this capability, the tasks listed in MCO 1510.101 for the Assault Breaching skill will be trained to standard. Additionally, any assault breaching who conducts explosive breaches will receive formal training at the Assault Breacher's Course at MCCDC or SOTG.

TASK: 5815.04.01 (CORE PLUS) MAINTAIN A BREACHER'S LOGBOOK

CONDITION(S): Given a specific target, breaching charge, assault breacher's equipment, and a breacher's logbook.

STANDARD(S): Place appropriate entries, per the references.

PERFORMANCE STEPS:

1. Compile all necessary information correctly and accurately.

INITIAL TRAINING SETTING: FLC Sustainment: 3 Req By: Cpl

REFERENCE(S):

1. Guidebook for Assault Entry Techniques, Volume I and II
2. Installation Special Reaction Team (SRT) Standing Operating Procedure (SOP)

TRAINING MATERIEL:

1. * Breacher's logbook

ADMINISTRATIVE INSTRUCTIONS:

1. Logbook issued by SOTG's or MCCDC, Quantico, during entry level training.

TASK: 5815.04.02 (CORE PLUS) COMPUTE THE NET EXPLOSIVE WEIGHT (NEW)

CONDITION(S): Given a target and specific breaching charge, common mathematical conversion factors, and with the aid of references.

STANDARD(S): Compute the correct NEW for the explosive charge.

PERFORMANCE STEPS:

1. Reference Assault Breacher Guidebook, volume 1, to compute NEW of given charge.

INITIAL TRAINING SETTING: FLC Sustainment: 3 Req By: Cpl

REFERENCE(S):

1. Guidebook for Assault Entry Techniques, Volume I and II

TRAINING MATERIEL:

1. Assault Breachers Kit (ABK), SL-3 Complete
2. * Breacher's logbook

ADMINISTRATIVE INSTRUCTIONS:

1. During initial training, the student must be able to demonstrate the ability to complete the task without the aid of a calculator.

TASK: 5815.04.03 (CORE PLUS) PLAN AN ASSAULT BREACH

CONDITION(S): Given a specific target and adequate intelligence information.

STANDARD(S): Plan an assault breach to incorporate one of the three types of entry techniques. Use the minimum amount of force necessary to ensure 100 percent penetration of the target and provide a point of entry for the assault team per the references.

PERFORMANCE STEPS:

1. Begin planning.
2. Analyze tactical considerations with emphasis on targeted entry point.
3. Determine primary and alternate breach points.
4. Determine type of breach.
5. Determine appropriate protective measure(s).
6. Determine materials needed for breach.
7. Determine type and placement of diversionary charge(s) (if required).
8. Prepare breacher's brief.
9. Conduct a breaching rehearsal.

INITIAL TRAINING SETTING: FLC Sustainment: 3 Req By: Cpl

4. Map, map overlay paper, protractor, grease/alcohol marker(s)
5. Maps and building/facilities blue prints

TASK: 5815.04.04 (CORE PLUS) CONSTRUCT A PRIMING SYSTEM

CONDITION(S): Given the appropriate materials to construct a priming system, Assault Breacher's Kit, Breacher's Logbook, and any other necessary materials.

STANDARD(S): Construct a priming system which, when employed, results in absolute initiation of a given charge per the references.

PERFORMANCE STEPS:

1. Select appropriate electric or nonelectric priming system.
2. Assemble the priming charge.
3. Prepare priming charge for employment.

2. The student must observe all explosive safety precautions.
3. Actual Class V(W) are required to perform this task.
4. Priming Charge may be improvised using various Class V(W) material.

TASK: 5815.04.05 (CORE PLUS) CONSTRUCT A "C" CHARGE

CONDITION(S): Given a designated target, explosives, Assault Breacher's Kit, and any other necessary materials.

STANDARD(S): Construct a "C" charge which when employed will result in 100 percent penetration of the target while limiting the amount of collateral damage per the references.

PERFORMANCE STEPS:

1. Select appropriate material.
2. Select appropriate explosives for the designated target.
3. Assemble the charge.
4. Prepare a priming system.
5. Compute the Net Explosives Weight (NEW).
6. Prepare a breaching report.
7. Prepare charge for employment and conduct rehearsal of employment.
8. Properly place the charge on the designated target and detonate.
9. Evaluate results.

2. Actual Class V(W) are required to perform this task.
3. Charge may be improvised using various Class V(W) material.

TASK: 5815.04.14 (CORE PLUS) CONSTRUCT A SATELLITE CHARGE

CONDITION(S): Given a designated target, explosives, Assault Breacher's Kit, and any other necessary materials.

STANDARD(S): Construct a satellite charge which, when employed, results in 100 percent penetration of the target while limiting the amount of collateral damage per the references.

PERFORMANCE STEPS:

1. Select the appropriate materials.
2. Select the appropriate explosives for the designated target.
3. Assemble the charge.
4. Prepare a priming system.
5. Compute the Net Explosive Weight (NEW).
6. Prepare a breaching report.
7. Prepare charge for employment and conduct rehearsals on placement.
8. Properly employ the charge on the designated target and detonate.
9. Evaluate results.

TASK: 5815.04.20 (CORE PLUS) BRIEF THE PRINCIPLES AND THEORY OF EXPLOSIVE DETONATION

CONDITION(S): Given a breaching charge, a shaped charge or other military explosives, and a target.

STANDARD(S): Brief all principles and applied theories without the aid of the reference.

PERFORMANCE STEPS:

1. Explain the theory and operation of a shape charge.
 - a. Explain how the explosively formed penetrator of a shape charge works.
 - b. Explain how different casing and liner materials effect shape charge penetration.

2. Explain the effects of blast pressure within a structure.
3. Explain how density effects explosive pressures.
4. Explain how detonation pressures effect a structure.
5. Calculate over pressure for a charge.
6. Explain how explosive tamping works.
 - a. Explain the effects of water tamping.
 - b. Identify and explain fragment reducing tamping materials and how they work.

CONDITION(S): Given a scenario, objective, and breaching target in a tactical environment, equipped with explosive or mechanical window breaching method, and SRT equipment.

STANDARD(S): Execute an assault breach that minimizes glass fragmentation and ensures 100 percent penetration of the target while providing a suitable entry point for the assault team.

PERFORMANCE STEPS:

1. Determine the type of glass to be breached.
2. Determine breaching technique.
3. Prepare the breaching tools/charge.
4. Brief assault team, specifically include glass hazards.
5. Employ the chosen breach technique.
6. Complete the breach report.

TASK: 5815.05.01 (CORE PLUS) PERFORM PREVENTIVE MAINTENANCE (PM) ON THE DESIGNATED MARKSMAN (DM) RIFLE

CONDITION(S): With T/O weapon, operator's manual, cleaning equipment, approved cleaning solvents and lubricants.

STANDARD(S): Per the references.

PERFORMANCE STEPS:

1. Handle the weapon safely (continuous).
 - a. The four safety rules.
 - b. Weapons conditions.
2. Place the weapon in "Weapons Condition 4".
3. Disassemble the rifle.
4. Clean the rifle.
5. Lubricate the rifle.
 - a. Normal conditions/environment.

TASK: 5815.05.05 (CORE PLUS) ZERO THE DESIGNATED MARKSMAN (DM) RIFLE

CONDITION(S): Given T/O weapons, equipment, ammunition, an observer, and a known distance zero target.

STANDARD(S): Per the references.

PERFORMANCE STEPS:

1. Handle the weapon safely. (continuous)
 - a. The four safety rules.
 - b. Weapons conditions.
 - c. Apply immediate/remedial action, as required.
2. Place scope on initial elevation, windage and fine tune settings.

- a. Set elevation knob at "1".
- b. Set fine tune at "0".
- c. Set windage knob at "0".
3. Assume the supported prone firing position.
 - a. Three elements of a rifle firing position.
 - b. Seven factors common to all rifle firing positions.
4. Prepare for firing.
 - a. Load the rifle.
 - b. Make the rifle ready.
5. Fire three well aimed shots while applying the fundamentals of marksmanship.
 - a. Aiming
 - b. Breath control.
 - c. Trigger control.
6. Record information in the data book.
7. Analyze data.
 - a. Determine the center of the shot group.
 - b. Determine distance, in inches, from point of aim to center of group, both vertically and horizontally.
8. Apply required adjustments to scope.
9. Fire a second zeroing group. (repeat steps 5 through 8)
10. Fire a well aimed four shot group to confirm zero.

SUMMARY/INDEX OF INDIVIDUAL TRAINING STANDARDS BY SPECIFIC CATEGORY (MOJT, DL, PST)

1. This enclosure summarizes the Individual Training Standards (ITS) according to three categories:

Appendix A: ITSs Trained via Managed On-The-Job Training (MOJT)

Appendix B: ITSs Supported by Distance Learning (DL) Products

Appendix C: ITSs Supported by Performance Support Tools (PST)

2. If no information is applicable to a category, the appendix will include a statement to that effect.

3. Format. The columns in each appendix are as follows:

a. SEQ. Sequence Number. This number dictates the order in which tasks for a given duty area are displayed.

b. TASK. ITS Designator. This is the permanent designator assigned to the task when it is created.

c. TITLE. ITS Task Title.

d. CORE. An "X" appears in this column when the task is designated as a "core" task required to "make" a Marine or qualify that Marine for the appropriate MOS. The absence of an "X" indicates that this is an advanced ("core plus") task that is mission, grade, or billet specific.

e. FLC. Functional Learning Center. An "X" appears in this column when the FLC is designated as the initial training setting. The absence of an "X" indicates that the initial training is accomplished through Managed On-The-Job Training (MOJT).

f. DL. Distance Learning (DL) Product. An "X" in this column indicates that at least one DL product is associated with this task. Consult enclosure (6) for details.

g. PST. Performance Support Tool (PST). An "X" in this column indicates that at least one PST is associated with this task. Consult enclosure (6) for details.

h. SUS. Sustainment Training Period. An entry in this column represents the number of months between evaluation or retraining by the unit to maintain the proficiency required by the standard, provided the task supports the unit's METL.

i. REQ BY. Required By. An entry in this column depicts the lowest grade required to demonstrate proficiency in this task.

j. PAGE. Page Number. This column lists the number of the page in enclosure (6) that contains detailed information concerning this task.

INDIVIDUAL TRAINING STANDARDS TRAINED VIA MANAGED ON-THE-JOB TRAINING
